

Jackelin Hernandez

About me

A recent graduate from UCLA.

Strengths

- Hard-working
- Eye for detail
- Statistical Analysis

Interests

- Tennis
- Puzzles
- Dancing
- Violin
- Board Games

EDUCATION

Sep 2022-Jun 2026

Bachelor of Science in Statistics & Data Science

• University of California, Los Angeles 

UCLA

RELEVANT COURSEWORK

- Data Analysis and Regression • Design and Analysis of Experiment • Statistical Models
- Introduction to Time-Series Analysis • Linear Algebra • Calculus

CLASS PROJECTS

2026

Introduction to Time-Series Analysis: Stats 170

INDIVIDUAL • UCLA 

- Developed and executed a comprehensive time-series analysis on 13 years of Amazon (AMZN) closing prices to evaluate and forecast log-return trends.
- Tested and compared multiple candidate models to justify modeling decisions.
- Evaluated model adequacy by performing diagnostic checks, residual analysis, and autocorrelation testing to validate statistical assumptions.
- Designed a technical report using Quarto in R to generate data visualizations and document statistical findings.

2026

Applied Geostatistics: Stats C173

INDIVIDUAL • UCLA 

- Engineered a spatial data pipeline in R to analyze EPA's Outdoor Air Quality dataset, focusing on Ozone metrics, executing non-spatial exploratory data analysis (EDA) and auditing coordinated structures to ensure unique data points.
- Constructed and analyzed h-scatterplots and empirical variograms to model spatial continuity, directional dependence, and geometric anisotropy across target coordinate spaces.
- Deployed theoretical variogram models and Kriging algorithms to predict continuous Ozone concentrations across unsampled regions throughout California.
- Validated model performance by conducting rigorous cross-validation and residual analysis to quantify prediction error and ensure statistical adequacy.

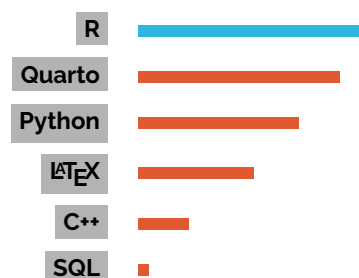

2025

Introduction to Design and Analysis of Experiment: Stats 101B

GROUP MEMBER • UCLA 

- Performed daily data collection within a simulation structured to mimic real-world participant activity.
- Designed an experiment and used R to create statistical models and plots to interpret results.
- Compiled and presented results in a comprehensive report, relating findings to external sources.
